DETAILED ACTION

1. Claims 1-11 and 15-16 are allowable. The restriction requirement, as set forth in the Office action mailed on 01/22/2010, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a).

The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim. Claims 3,4 and 11, directed to non elected inventions are no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim. However, claims 12, 13 and 14, directed to non elected inventions are withdrawn from consideration because the claim(s) do not require all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

2. This application is in condition for allowance except for the presence of claims 12,13 and 14 directed to inventions non-elected without traverse.

Accordingly, claims 12,13 and 14 have been cancelled.

Allowable Subject Matter

3. Claims 1-11 and 15-16 are allowed over the prior art of record.

Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance: prior art of record do not teach or suggest the following invention: a printing apparatus, comprising: a carry mechanism; a nozzle that performs ejecting a first ink droplet and ejecting, after the first ink droplet has been ejected, a second ink droplet that has a size different from a size of the first ink droplet, the second ink droplet being ejected in between two first ink droplets ejected in one moving and ejecting operation; and a signal output section that outputs a first timing defining signal defining periodically in a predetermined period an ejecting timing for ejecting the first ink droplet from the nozzle toward a position corresponding to a pixel configuring an image to be printed, and a second timing defining signal defining periodically in a predetermined period an ejecting timing for ejecting the first ink droplet from the nozzle toward a position displaced in the intersecting direction from the position corresponding to a pixel configuring an image to be printed, wherein the signal output section outputs either the first timing defining signal or the second timing defining signal in one moving and ejecting operation, and wherein one raster line is formed by at least one or more times of the first timing defining signal and at least one or more times of the second timing defining signal being used in two or more moving and ejecting operations, and by a plurality of dots being formed with the first ink droplet and the second ink droplet on the medium.

Art Unit: 2861

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
